Notice No. 11-02

Date: February 18, 2011

---

New Cumberland L/D, Ohio River, Mile 54.4  
Renovate River Wall Filling Valve, Middle Wall Filling Valve, and  
Operating Machinery in the  
Large 110' x 1200' Lock Chamber

1. To All Whom It May Concern: Notice is given that the U.S. Army Corps of Engineers' Repair Fleet will renovate the river wall filling valve, middle wall filling valve, and operating machinery in the 110' x 1200' river lock chamber at New Cumberland L/D, Ohio River, Mile 54.4. The work is scheduled to begin at 1:00 A.M. on March 16, 2011 and be completed by about 11:00 P.M. on April 15, 2011.
2. The large 110' x 1200' lock chamber will be open during the repair work, except as noted. The large 110' x 1200' lock chamber will be closed periodically to move parts and equipment. These closures could last up to 8 hours and are necessary while working on the river wall valve.
3. The small 110' X 600' lock chamber will be closed for the entire duration of this work.
4. Normal wear and deterioration of these valves and operating machinery have made it necessary to schedule this work.
5. Navigators should note the duration of the closures and are requested to use caution while entering or leaving the lock chamber.

FOR THE DISTRICT ENGINEER:

//Signed//  
Richard C. Lockwood  
Chief, Operations Division
